Minicurso de Bots Discord com Python

Discord.py

É a biblioteca que iremos usar.

Ela é um wrapper para utilizar a API do discord que controla os bots de forma amigável.

Instalação Discord.py

Para instalar, abra um terminal e digite: pip install discord.py -U

A instalação deverá finalizar sem erros:

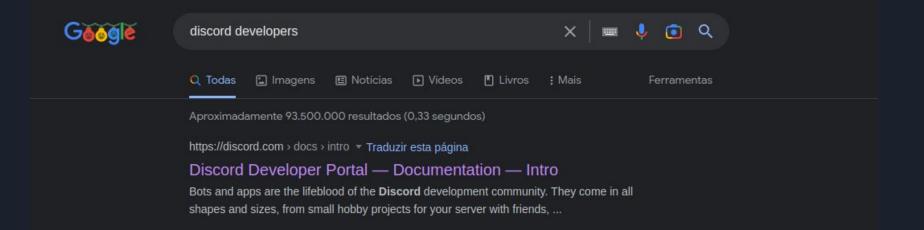

```
Collecting idna>=2.0

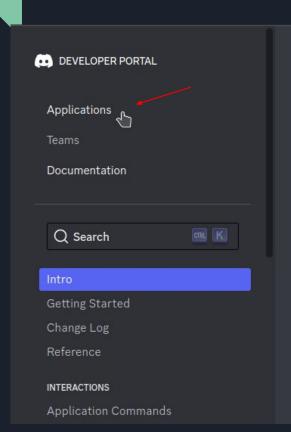

Downloading idna-3.4-py3-none-any.whl (61 kB)

| 61 kB 63 kB/s

Installing collected packages: multidict, idna, yarl, charset-normalizer, frozenlist, async-timeout aiosignal, attrs, aiohttp, discord.py

Successfully installed aiohttp-3.8.3 aiosignal-1.3.1 async-timeout-4.0.2 attrs-22.1.0 charset-normaizer-2.1.1 discord.py-2.1.0 frozenlist-1.3.3 idna-3.4 multidict-6.0.3 yarl-1.8.2

Documentação

```
Natas Today at 3:23 AM
```

```
import discord
                         Quais outros parâmetros essa função recebe?
client = discord.Client(intents=discord.Intents.all())
    print(f'Logado com sucesso como {client.user}')
                                   O recebemos dentro de message?
async def on message(message):
    if message.author == client.user:
                                                          Quais outros atributos existem dentro de author?
    if message.content.lower().startswith('!oi'):
        await message.channel.send(f'0ii {message.author.mention}!')
```
